Fate Favours the Prepared

Dear Life Saver,

This very moment someone somewhere in our country may be experiencing the horror of a fire accident! It takes less than 30 seconds for a small flame to go completely out of control and a building or a plant can be engulfed in an inferno and thick smoke in no time at all.

Fire can be deadly-injuring and killing people, destroying assets and wiping out business.

Did you know that the first 3 minutes of a fire accident are the most crucial? If the fire is immediately brought under control within that time, then huge losses to life and property can be averted. This is where fire extinguishers can be life savers!! They are designed to put out small fires at the incipient stage itself and are thus guardians of life and property. Equipping the workspace with the right fire extinguishers is thus an essential part of the fire protection and business continuity plan. The installation and maintenance guideline for portable fire extinguishers are also detailed in IS 2190 - 2010.

Along with equipping the workplace with ideally suited fire extinguishers, it is also essential to create awareness and sensitize people about fire safety measures. Imparting proper training in operating the fire extinguishers, developing well equipped and well trained Emergency Response Team (ERT) from among the company personnel and conducting regular mock drills will help to ensure that corrective action is taken an emergency thus averting a major disaster.

Please feel free to contact us for any details on fire safety equipments, automatic fire suppression systems or any other customized life safety solutions.

We are always at your service!!
